

SymPhoTime 64

The [PicoQuant](#) SymPhoTime 64 software package is an integrated solution for data acquisition and analysis using PicoQuant's time-resolved confocal microscope [MicroTime](#), LSM upgrade kits or [TCSPC](#) electronics. Its clearly structured layout and powerful analysis routines allows the user to focus on the results rather than on the data processing. The software is designed for a 64 bit operation system and features a graphical user interface (GUI), which guides the user through all necessary steps for an individual analysis or measurement process. Data dependencies are directly visible in the underlying workspace concept. An integrated scripting language ("STUPSLANG") even puts the user in a position to freely add new analysis procedures or customize existing ones.

For more information, latest version and download link see [SymPhoTime64](#).

HowTo's and Tutorials

General
